Overview of Charles Law

Charles's Law is one of the fundamental gas laws that explains how gases behave under changing temperature conditions when pressure remains constant. It states that:

> The volume of a given mass of gas is directly proportional to its absolute temperature (measured in Kelvin), provided the pressure remains unchanged.

This relationship can be mathematically expressed as:

$$\frac{V_1}{T_1} = \frac{V_2}{T_2}$$

Where:

- V_1 and V_2 are the initial and final volumes,
