- Warehouse Staff: Manages stock updates and inventory audits
- Inventory System: Core software managing stock levels and transactions
- Supplier: Supplies stock when inventory is low
- Order Management System: Handles order processing and tracking
- Admin: Oversees system configurations and reports

Object Lifelines

Each actor or component involved in the process is represented with a vertical dashed line called a lifeline, indicating its presence over time during interactions.

Messages

Arrows between objects represent messages, which can be:

- Synchronous: Waiting for a response (e.g., "Check stock availability")
- Asynchronous: Non-blocking calls (e.g., "Notify supplier")
- Return messages: Responses from a component

Creating a Sequence Diagram for Inventory Control System

- Review and Refine: Ensure the sequence accurately reflects the actual workflow.

Example: Sequence Diagram for Stock Replenishment Process

Scenario Overview

This example illustrates how the system handles a stock replenishment request when inventory levels fall below a predetermined threshold.

Sequence of Interactions

- Inventory System detects low stock during routine check.
- It sends a "Reorder Request" message to the Order Management System.
- The Order Management System evaluates supplier availability and sends a "Place Order" message to the Supplier.
