Understanding Reaction Time and Its Importance

What Is Reaction Time?

Reaction time (RT) is a measure of how quickly an individual responds to a stimulus. It encompasses several stages, including:

- Sensory processing: perceiving the stimulus
- Cognitive processing: interpreting the stimulus
- Motor response: executing the physical action

The overall reaction time is a composite of these stages and can be influenced by numerous factors, including age, health, attention, and the characteristics of the stimulus.

Why Focus on Preferred Hand?

The preferred hand, often the dominant hand, is used for most fine motor tasks and is typically more skilled and faster in response. Studying reaction times for the preferred hand can:
