

- Proper selection of sampling length and cut-off frequency ensures meaningful and repeatable measurements.

Surface Roughness Parameters

Most instruments compute standard parameters such as:

- **Ra (Average Roughness):** The arithmetic mean of the absolute deviations from the mean line.
- **Rz (Maximum Height of the Profile):** The average of the sum of the highest peak and lowest valley within several sampling lengths.
- **Rt (Total Roughness):** The total height difference between the highest peak and lowest valley.
- **Rq (Root Mean Square Roughness):** The standard deviation of the surface profile, sensitive to larger deviations.

Data Output and Integration

- Compatibility with computer systems and data analysis software.
- Ability to store, export, and analyze measurement data for quality control documentation.

Ease of Use and Calibration

- User-friendly interfaces, quick calibration procedures, and minimal maintenance are preferred for efficiency.
