Calculators are permitted, so students should be comfortable using them efficiently. Online tutorials, study guides, and group discussions can also aid comprehension.

Sample Questions and Solutions from the 2013 Exam

Providing examples of actual questions helps illustrate the style and difficulty level of the exam.

Sample Question 1: Percentages

A shop offers a 15% discount on a jacket that costs R400. What is the discounted price?

Solution:

$$\text{Discount amount} = 15\% \text{ of R400} = 0.15 \times \text{R400} = \text{R60}$$

$$\text{Discounted price} = \text{R400} - \text{R60} = \text{R340}$$

Sample Question 2: Data Interpretation

A line graph shows the number of visitors to a park over 6 months. In June, there were 1200 visitors, and in December, there were 1800 visitors. Assuming a steady increase, estimate the number of visitors in September.

Solution:

Total increase over 6 months = $1800 - 1200 = 600$

Monthly increase = $600 / 6 = 100$

Visitors in September (3 months from June):

June = 1200

July = $1200 + 100 = 1300$

August = $1300 + 100 = 1400$

September = $1400 + 100 = 1500$

Sample Question 3: Financial Mathematics

Calculate the simple interest on R2000 invested at 10% per annum for 2 years.

Solution:

Interest = Principal $\times$ Rate $\times$ Time

Interest = $R2000 \times 0.10 \times 2 = R400$
