- When stop is pressed, de-energize the coil.

- Implement the Logic

- Rung 1: Start button normally open, connected in series with the motor coil.
- Rung 2: Stop button normally closed, placed in series to break the circuit when pressed.

- Solution in Ladder Logic:

...

|---[Stop]---[Start]---(Motor)---

||

|------(Seal)|

...

Where the seal contact is a normally open contact from the motor coil, closing when the coil is energized, maintaining the circuit after the start button is released.

- Verify and Test

Use simulation software or real hardware to ensure the circuit operates as intended.
