- Requires skill and precision

2. Glass Etching (Sandblasting and Acid Etching)

Etching creates a frosted or matte appearance on the glass surface, offering a different aesthetic compared to engraving.

Types of Etching:

- Sandblasting
- Acid etching

Sandblasting

Tools and Materials:

- Sandblasting cabinet or booth
- Stencils or adhesive masks
- Fine abrasive media like aluminum oxide or silicon carbide

Process:

- The design is transferred onto the glass surface using stencils or masking tape.
- The glass is placed in a sandblasting cabinet.
- Abrasive media is blasted at high velocity onto exposed areas, etching the surface.
- Once etching is complete, the mask is removed, revealing frosted patterns.

Applications:

- Decorative glass panels
- Corporate logos on glass doors
- Personalized giftware

Advantages:

- Produces uniform, professional-looking frosted designs
- Suitable for larger or multiple pieces

Limitations:

- Requires specialized equipment
