Sample Bio 211 Final Exam Study Guide Questions and Answers

Below are some common questions and well-explained answers that often appear on the Bio 211 final exam. These can serve as a reference point for your revision.

Cell Biology

- **Q:** What are the main differences between prokaryotic and eukaryotic cells?
- **A:** Prokaryotic cells lack a nucleus and membrane-bound organelles, are generally smaller, and include bacteria and archaea. Eukaryotic cells have a nucleus, various membrane-bound organelles such as mitochondria, endoplasmic reticulum, and are found in plants, animals, fungi, and protists.
- **Q:** Describe the function of the mitochondria.
- **A:** Mitochondria are known as the powerhouses of the cell. They generate ATP through cellular respiration, providing energy necessary for various cellular processes.

Genetics

- **Q:** What is Mendel's Law of Segregation?
- **A:** Mendel's Law of Segregation states that during the formation of gametes, the two alleles for a gene separate so that each gamete carries only one allele for each gene. This explains how offspring inherit one allele from each parent.
- **Q:** Define Homozygous and Heterozygous.
- **A:** Homozygous refers to having two identical alleles for a particular gene (e.g., AA or aa), while heterozygous means having two different alleles (e.g., Aa).

Evolution

- **Q:** What is natural selection?
- **A:** Natural selection is the process where organisms with advantageous traits are more likely to survive and reproduce, passing those traits to the next generation. Over time, this leads to evolutionary change.
- **Q:** Explain the concept of genetic drift.
- **A:** Genetic drift refers to random changes in allele frequencies within a population, which are especially significant in small populations. It can lead to the loss or fixation of alleles regardless of their advantageous or disadvantageous effects.
